This letter is to express my support for the Project Native proposal to help restore the native habitats of floodplain forests in the Housatonic River valley.

My respect for Raina Weber and her initiative and persistent hard work establishing Project Native continues to grow. It is my opinion that working in collaboration with The Nature Conservancy, the Sheffield Land Trust, the Kampoosa Bog Committee, the Southern Berkshire Regional School District, and individual farmers in the area, Project native will implement such a restoration projects and assist in educating the public on the many issues surrounding such issues.

Sincerely,

Honey Sharp
